

Ascot Hide Leather – is a mid range leather, which is stocked in black, and offered made to order in 5 colours. The material is best branded by blind embossing.

NEW

E-Leather is made from recycled leather fibre, and is unlike any other material on the market. Waste leather fibres are combined via a heavily patented high water pressure process to create a soft, high quality embossable material.

Environmental benefits

- The leather used would normally go to landfill.
- No chemicals are used in the entangling process, and wastewaters are recycled in a continuous closed-looped system.
- Carbon footprint is reduced, as the oil-based adhesives used in bonded leather are not needed.
- UK made means a low carbon footprint.
- Product emissions are thermally oxidated and the energy generated is fed back into the manufacturing process.

Performance and Quality Benefits

- The high % of leather fibre makes E-Leather absorbent to water vapour, providing a soft, flexible product unlike bonded leather.
- High and consistent performance in tear and tensile performance tests.
- Greater elasticity than bonded leather, improving the quality and feel of the products.
